

Simply enable Windows applications on Mac® for your employees.

Built on the world's best desktop virtualization solution, Parallels Desktop for Mac Business Edition adds centralized administration, management, and security features to keep IT in control of virtual machines while still delivering best-in-class user performance for the most seamless solution between Mac and Windows.

Business-Class Features for Company Deployments

- Single license key
- License Management Portal
- 24/7 priority phone and email support
- Mass deployment tools
- Enhanced security controls
- Ability to encrypt virtual machines
- Manage with Parallels® Mac Management for Microsoft® SCCM

System Requirements

- Late 2012 Mac or newer; OS X® El Capitan or newer
- For mass deployment, use Jamf Pro, Apple Remote Desktop™, IBM® Endpoint Manager, or Parallels Mac Management for Microsoft SCCM

Feature	Parallels Desktop for Mac Business Edition	Parallels Desktop 15 for Mac

Encryption of virtual disks with Parallels or third-party encryption engine	✓	
Smart card reader support for Windows	✓	

Windows on Mac for Everyone in Business and Education

Provide business-critical applications on your employee's Mac, like Microsoft Office, Internet Explorer, QuickBooks™ and hundreds of others. Ideal for any work environment, from education to financial services, technology, consulting or medical.

Mass Deployment

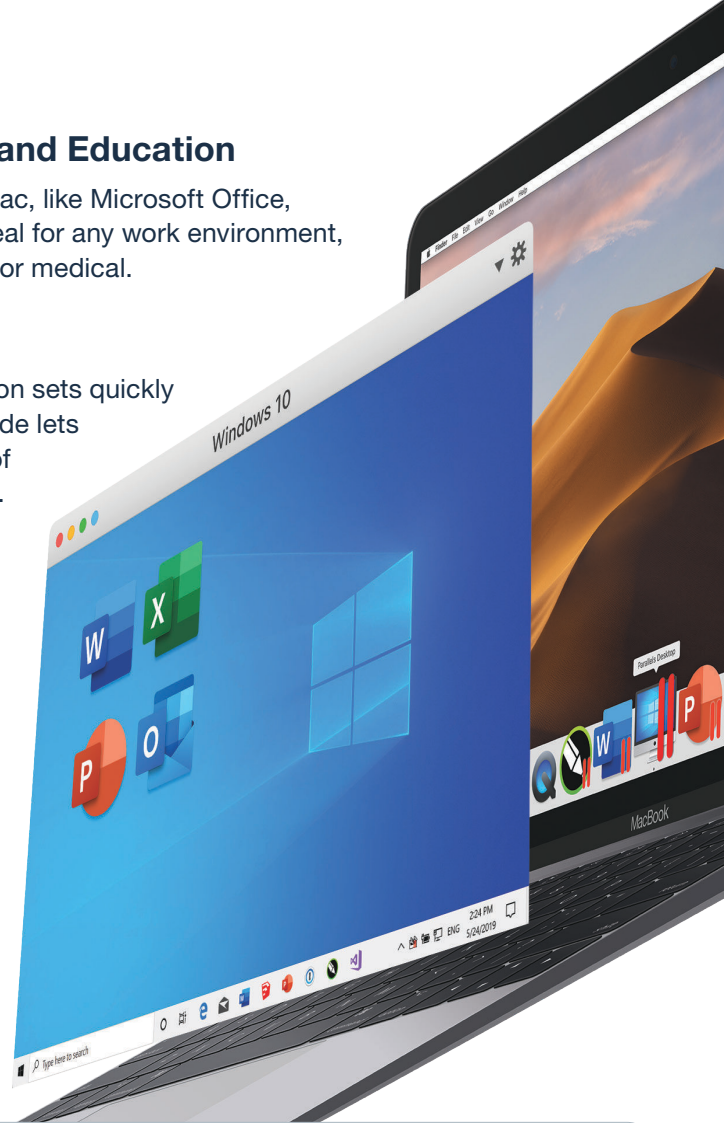

Deploy Windows virtual machines with the same configuration sets quickly and effortlessly. Optional Single Application deployment mode lets Mac users run a Windows application without being aware of Parallels Desktop and Windows running in a virtual machine.

License Management

Use a single license for all installations, or enroll new users via email without even mentioning a key. Parallels Desktop Business Edition will activate on end users' Mac computers automatically. Administrators have the ability to see, deploy, deactivate and blacklist licenses based on Mac computer host name, username and a serial number.

Security and Data Protection

Encrypt virtual machines' data, enforce external devices policies, restrict your users from changing Parallels Desktop and virtual machine settings or create expiring virtual machines that will lock down once expired.

Fast, Powerful, Seamless and Easy

The scientists and staff at La Jolla Institute for Allergy and Immunology use Mac devices for scientific research, but applications they use to track patents, contracts and grants run only on PCs. Installing a Mac and PC for each person wasn't in the budget and would burden tech support. The institute needed a way to run both macOS and Windows.

“Parallels makes your workflow so much easier because you're not switching devices.”

—Matt Wilce, Director of Coms and Annual Support

A seven-person IT team supports more than 1,500 machines in a school that uses Apple® devices almost exclusively. Some staff in the technology, communications and administrative departments use iMac® devices and are required to access several key Windows-only applications from Blackbaud for the administration and fundraising database.

“Parallels Desktop for Mac Business Edition solved everything we wanted and at the right price. It's low impact for the user and it's not complicated.”

—Michael Scarpelli, Senior IT Manager
